

First of all. This has been very interesting challenge specially this part. I love to discuss the hypothesis and the theories.

I am Abhishek. I am from Rajasthan; I love how warm and kind the people of Rajasthan have been wherever I have traveled. This state is slow-paced and culturally very rich. I was born in a lower-middle-class family which is a very interesting set of people in the world.

Somehow because of ignorance and a lot of hard work I cleared one of India's toughest exam and got into **THE IIT**. IIT puts a great set of people around you which helps a lot to push yourself.

I have a very interesting theory - **“The biggest pro is your Biggest con too”**. I will prove this with very simple example -

Let's take the game of cricket, The famous VIRAT KOHLI hits brilliant cover drives and is best in the business but because in test cricket he gets out on the ball at the 6th or 7th stump because he feels like he can hit the ball well but instead gets out.

A. Why should I ditch someone who's more qualified and has a better solution than you and hire you instead?

Ans – If your most talented resource doesn't gel with the people in the team then growth of the team will take seat and individual achievements will become more important

B. What's more important- the institute name or the course you study?

Ans – Both are extremely important.

A decent institute is always helpful as you think you grow independently but action of people near you influences you a lot. A good set of crowd is extremely important which is something a good institute always has. Resources for research is also better.

These days, computer science is getting reinvented every single day which create space for more creativity and hunger for learning. As new technologies come then new professionals also needed so more jobs also exist for such course.

C. What was the biggest setback in your life, and how did it change you as a person?

Ans – When I entered into the college for the first day, I understood that I have a lot to catch. Within few days of college, I decided to work more on my soft skills along with the technicals

D. List at least 3 things you've learned about life?

Ans – I have learned a lot in life. I sometimes get infuriated when someone asks me to point out some. Still, I will try -

- There is nothing absolute. Everything is relative
- Never believe in Govt and look for conspiracies which has more chances of being truth.
- Schools are not for studying but for social interaction.

E. What would you do differently if nobody judged you?

Ans – I do nothing if that person doesn't add any value in my life. If a close person, does it, I will bring that back somehow through conversation.

F. When do you work at your best? Individually, or in a team?

In a team with some individual time.

g. What's more important as a leader in both positive and negative outcomes?

Taking the responsibility for the team, or holding each other's accountable?

h. What do you think about work-life balance?

Ans – This concept is erroneous. These two are never separate. There is now life without work and better life leads to higher productivity and vice versa
